

Streamlining IT Procurement

Automating Standard Laptop Orders with Flow Designer

Field	Value
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Primary Platform	ServiceNow
Automation	Flow Designer
Primary Service	Standard Laptop
Primary Assignment Group	Hardware
Approval State	Approved
Team ID	SWTID-2026-7266

Team	Members
Team leader	Swetha.K
Team member	Tharanika.B
Team member	Mukilvani.T
Team member	Thilagavathi.A

1. Project Overview

The current IT procurement process for standard laptops involves manual configuration and task handling, which can cause delays, oversight, and additional manual effort. The proposed solution uses ServiceNow Flow Designer to automatically create a Catalog Task after the Standard Laptop request is approved, populate the task details, and assign it to the Hardware group.

3. Data Flow Diagram (DFD)

The supplied DFD template describes a DFD as a representation of how data enters and leaves the system, how information is processed, and where data is stored. The following Level-0 style flow applies that framing to the Standard Laptop procurement process.

Source	Data	Process / Destination	Stored / Resulting Data
Employee / Requester	Standard Laptop request	ServiceNow Service Catalog	Request / Requested Item record
ServiceNow Service Catalog	Request + approval status	Approval process	Request approval state
Approval process	Approved request	Flow Designer	Trigger event / request context
Flow Designer	Create Catalog Task	Catalog Task	Task record
Flow Designer	Assignment + task details	Hardware Team	Configuration task
Hardware Team	Configuration progress / completion	ServiceNow	Catalog Task status
ServiceNow	Request/task status	Employee / IT stakeholders	Status information

Level-0 logical flow:

[Employee]
 ↓ Standard Laptop Request
 [Service Catalog]
 ↓ Approval
 [Approved Request]
 ↓ Trigger
 [Flow Designer]
 ↓ Create Catalog Task
 [Catalog Task]
 ↓ Assignment = Hardware
 [Hardware Team]
 ↓ Configuration / Status
 [ServiceNow Records]
