1. Project Overview

The current IT procurement process for standard laptops involves manual configuration and task handling, which can cause delays, oversight, and additional manual effort. The proposed solution uses ServiceNow Flow Designer to automatically create a Catalog Task after the Standard Laptop request is approved, populate the task details, and assign it to the Hardware group.

10. Project Outcome

The proposed solution streamlines standard laptop procurement by replacing a manual configuration-task handoff with a repeatable Flow Designer workflow. Based on the supplied project document, the expected outcomes are timely laptop configuration, reduced manual intervention, improved resource allocation, reduced user waiting time, and a more consistent IT procurement experience.
