1. Project Overview

The current IT procurement process for standard laptops involves manual configuration and task handling, which can cause delays, oversight, and additional manual effort. The proposed solution uses ServiceNow Flow Designer to automatically create a Catalog Task after the Standard Laptop request is approved, populate the task details, and assign it to the Hardware group.

5. Solution Requirements

The supplied solution-requirements template separates functional and non-functional requirements. The requirements below are tailored to the uploaded project description and implementation steps.

FR No.	Functional	Sub Requirement
--------	------------	-----------------

	Requirement (Epic)	(Story / Sub-Task)
FR-1	Standard Laptop Request	Provide Standard Laptop as a Service Catalog item.
FR-2	Approval	Process the request through approval and use the Approved state for automation.
FR-3	Automated Catalog Task	Create a Catalog Task after an approved Standard Laptop request.
FR-4	Task Assignment	Set Assignment group to Hardware.
FR-5	Task Description	Set short description and description to "Laptop need to Configured".
FR-6	Flow Activation	Save and activate the Standard Laptop Task flow.
FR-7	Catalog Integration	Associate the created flow with the Standard Laptop service catalog item through Process Engine.
FR-8	Status Verification	Allow users/IT stakeholders to inspect the Requested Item and Catalog Tasks.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Standard Laptop request and resulting task should follow a clear, repeatable workflow.

NFR-2	Security	Access to requests, approvals, and task records should follow ServiceNow access controls.
NFR-3	Reliability	Approved requests should consistently generate the required Catalog Task.
NFR-4	Performance	Automation should reduce manual processing and avoid unnecessary waiting between approval and task creation.
NFR-5	Availability	The workflow should operate whenever the ServiceNow platform and relevant services are available.
NFR-6	Scalability	The automated flow should support repeated Standard Laptop requests without manually creating each task.
