1. Project Overview

The current IT procurement process for standard laptops involves manual configuration and task handling, which can cause delays, oversight, and additional manual effort. The proposed solution uses ServiceNow Flow Designer to automatically create a Catalog Task after the Standard Laptop request is approved, populate the task details, and assign it to the Hardware group.

6. Technology Stack Canvas

The supplied technology-stack template asks for application logic/technology blocks, infrastructure demarcation, external interfaces, data storage, and application characteristics.

Component	Description	Technology / Implementation
1. User Interface	How the user interacts with the application.	ServiceNow Service Catalog / Standard Laptop catalog item
2. Application Logic-1	Logic for request and approval processing.	ServiceNow Service Catalog + Approval process
3. Application Logic-2	Logic for automation.	ServiceNow Flow Designer
4. Application Logic-3	Logic for task creation and assignment.	Flow Designer – Create Catalog Task action
5. Database	Request, Requested Item, approval and Catalog Task records.	ServiceNow platform data tables
6. Cloud Database	Platform-hosted application data service.	ServiceNow platform data layer
7. File Storage	No specific file-storage requirement identified in the supplied project.	Not applicable / not specified
8. External API-1	External integration for this workflow.	None specified in the supplied project
9. External API-2	External integration for this workflow.	None specified in the supplied project
10. Machine Learning Model	ML interface, if applicable.	Not applicable to the supplied project
11. Infrastructure	Application deployment and workflow platform.	ServiceNow platform / cloud-hosted ServiceNow environment
